

ANTIFOG BARRIER

Antifog performance should be visible immediately when package has been sealed and even sooner. In nowadays multilayer high barrier and laminated food packages, Antifog tends to migrate toward polar areas like corona TR or lamination adhesives instead of towards the sealing layer. **BR7483PE and BR7783DP** are specially designed for Co-Ex Multilayer films with multiple challenges for AF like tie layers, corona TR, lamination adhesives. Using Tosaf's **ANTIFOG BARRIER** can increase the efficiency of Antifog additives for a better and long-lasting activity.

THE ADVANTAGES OF ANTIFOG VS. ANTIFOG BARRIER FILM STRUCTURES

ANTIFOG
Bi Directional Migration

Hazy
Sealing-AF-5%+PE
Core-AF-5%+PE
Outer Layer-PE 100%

ANTIFOG + BARRIER
Uni Directional Migration

Clear
Sealing-AF-5%+PE
Core-PE+15% BR
Outer Layer-PE 100%

ADVANTAGES

Activity
Better Antifog activity

Concentration
Lower Antifog loading

Bonding
Prevents Delamination

Processing
Less DB and better flow

Versatility
Oriented and nonoriented

Transparent
Excellent optics
